

## ABSTRACT

The present invention provides a mobile communication terminal casing and a mobile communication terminal which are capable of displaying an image that can be made to function as the external design of the mobile communication terminal, and with 5 which the image made to function as the external design can be easily changed or appropriately displayed, and a server apparatus providing data to the mobile communication terminal, and a mobile communication system comprising the mobile communication terminal and the server apparatus.

A display panel made of electronic paper is provided on externally exposed 10 portion of the present mobile communication terminal (mobile phone). This display panel forms a casing image displaying unit 217 and a casing image based on image data in accordance with a command from a main control unit 215.
